Subject: FW: DUI Labs

Amy,

[REDACTED] is in the batch pending review.

Please remove [REDACTED] from batch you are writing up. We will issue a report saying analysis canceled at request of prosecutor's office.

I don't think we have received the other yet.

Thanks,
Mindy

RE:

[REDACTED]

Please cancel the DUI BAC and Drug testing for these cases. All three of them plead guilty.

Thank you =)

Memorandum for Record

Date: 12/19/2016
From: Amy Langan, Forensic Scientist II, Toxicology
Re: [REDACTED] Sequence Batch 13Dec16

The sequence summary for batch 13Dec16 and the chromatograms from the following three cases from that batch had to be hand corrected after the run: [REDACTED]

The [REDACTED] The hand corrected data are included in Appendix 1. The need for these corrections arose from the creation of two worklists that included a subject sample that was not analyzed as part of batch 13Dec16. The first worklist (ZC7PB4SR0ZOBQS) included 28 cases (see Appendix 2). After creating the worklist, but prior to preparing the headspace vials, the request for analysis for DR [REDACTED] was canceled. The worklist was hand corrected for all vial numbers after vial 31 to reflect deletion of case [REDACTED] which was assigned vials 32 and 33, from the batch. This hand corrected worklist was used to label the headspace vials with their vial numbers, DR number, and subject name. The samples were pipeted based on the information transferred to the headspace vials from the hand corrected worklist (i.e. each headspace vial contained the correct sample). The samples were loaded into the instrument and analyzed according to the hand corrected worklist.

Prior to starting the batch analysis on the GC, a second worklist was generated to reflect the removal of case [REDACTED] (see worklist ZC7PB4SS0XPHLI in Appendix 3). This worklist was generated so that the sample information from LIMS could be transferred into the sequence on the GC. However, when this second worklist was generated, case [REDACTED] was added instead of case [REDACTED]. This worklist assigned case [REDACTED] to vials 43 and 44, case [REDACTED] to vials 45 and 46, and case [REDACTED] to vials 47 and 48. As a result, the sequence on the instrument had the incorrect case information for vials 43 through 48 resulting in the incorrect case information being printed on the corresponding chromatograms.

The correct case for vials 43 and 44 was case [REDACTED]. The correct case for vials 45 and 46 was [REDACTED]. The correct case for vials 47 and 48 was [REDACTED]. After the vials were analyzed on the instrument, I confirmed that the vials in position 43, 44, 45, 46, 47, and 48 were labeled with the correct case information (subject last name, DR number, and vial number) as reflected in the original hand corrected worklist and chromatograms.
